Full Stack Developer (SDE / Backend)

SUMMARY

Detail-oriented Full Stack Developer with hands-on experience building Spring Boot and MERN applications, REST APIs, JWT-based authentication systems, and AI-powered tools. Strong foundation in data structures and algorithms, React, Node.js, MongoDB, and SQL databases, with working knowledge of Docker, AWS, and CI/CD pipelines. Comfortable owning a feature end-to-end - from API design to deployment. Seeking SDE / Full Stack / Backend opportunities.

TECHNICAL SKILLS

- Languages: Java, JavaScript, Python, C
- Backend: Spring Boot, Node.js, Express.js, REST API Design, JWT Authentication
- Frontend: React.js, HTML5, CSS3, Android (Java)
- Databases: MongoDB, MySQL, SQL (queries, joins, schema design)
- DevOps & Cloud: Docker, AWS (basics), CI/CD pipelines, Git, GitHub
- Tools: Postman, Streamlit, Jupyter Notebook, Android SDK
- Core Concepts: Data Structures & Algorithms, OOP, System Design fundamentals
- Soft Skills: Strategic problem solving, continuous learning, collaborative team leadership

EXPERIENCE

Jr. Software Engineering Intern - Edutrainor | Automated Attendance System

Feb 2026 - Present

- Developed a full-stack attendance system using Spring Boot, Android (Java), MySQL, and REST APIs
- Implemented secure JWT-based authentication, QR-code attendance validation, and duplicate/proxy scan prevention
- Built Spring Boot backend modules for attendance management, student-course mapping, and RESTful API handling
- Integrated ZXing QR scanner and optimized mobile UI using RecyclerView with asynchronous data handling
- Improved system reliability and usability through real-time attendance tracking, secure validation workflows, and API performance optimizations

ACADEMIC PROJECTS

Paper Reviewer - AI-Powered Research Analysis Platform (MERN)

- Built a MERN platform that uses LLMs to analyze research PDFs, generating summaries, claim extraction, novelty detection, and semantic search
- Architected an Express backend to orchestrate an AI pipeline that parses unstructured text into structured entities such as Claims, Evidence, and Methods via LLM integration
- Used MongoDB for metadata storage and a vector database (embeddings) for high-confidence semantic mapping and similarity search
- Built a 'Hallucination Risk Scan' and reproducibility diagnostic to flag unquantified claims and audit code/dataset availability
- Developed a persona-based review engine to simulate diverse academic feedback

Subscription Tracker API (Node.js, Express, MongoDB)

- Engineered a scalable, secure RESTful API using Express.js with MongoDB models for efficient data storage
- Developed authentication and authorization systems, including user registration, login, and access control
- Built a reminder workflow engine to manage user subscriptions and automate time-sensitive email notifications

- Designed a structured API architecture with clear routes and a centralized error handler for predictable responses
- Deployed the application on a VPS, demonstrating practical DevOps and hosting skills

Motovalue - Used Car Price Prediction (Machine Learning)

- Built a used car price prediction model using Linear Regression with the Pandas/NumPy stack
- Trained the model on a real-world dataset and analyzed key features to determine market value
- Achieved an R-squared score of 0.92, demonstrating strong predictive accuracy

EDUCATION

- MCA - Dayananda Sagar College of Engineering, Bangalore - CGPA: 9.38 (Expected 2026)
- BCA - Sri Bhuvanendra College, Karkala - CGPA: 8.7 (2021-2024)
